A.	Provide block fillers, primers, finish coat materials, and related materials that are compatible with one another and the substrates
A.	Provide block fillers, primers, finish coat materials, and related materials that are compatible with one another and the substrates indicated under conditions of service and application, as demonstrated by the manufacturer based on testing and field experience.
A. B.	Provide block fillers, primers, finish coat materials, and related materials that are compatible with one another and the substrates indicated under conditions of service and application, as demonstrated by the manufacturer based on testing and field experience. Provide the manufacturer's best-quality trade sale paint material of the various coating types specified. paint material containers not displaying manufacturer's product identification will not be acceptable.
А. В.	Provide block fillers, primers, finish coat materials, and related materials that are compatible with one another and the substrates indicated under conditions of service and application, as demonstrated by the manufacturer based on testing and field experience. Provide the manufacturer's best-quality trade sale paint material of the various coating types specified. paint material containers not displaying manufacturer's product identification will not be acceptable. Match colors indicated by reference to the manufacturer's standard color designations.
А. В. D.	 Provide block fillers, primers, finish coat materials, and related materials that are compatible with one another and the substrates indicated under conditions of service and application, as demonstrated by the manufacturer based on testing and field experience. Provide the manufacturer's best-quality trade sale paint material of the various coating types specified. paint material containers not displaying manufacturer's product identification will not be acceptable. Match colors indicated by reference to the manufacturer's standard color designations. Examine substrates and conditions under which painting will be performed for compliance with paint application requirements. Surfaces receiving paint shall be thoroughly dry before paint is applied.
А. В. С. Е.	 Provide block fillers, primers, finish coat materials, and related materials that are compatible with one another and the substrates indicated under conditions of service and application, as demonstrated by the manufacturer based on testing and field experience. Provide the manufacturer's best-quality trade sale paint material of the various coating types specified. paint material containers not displaying manufacturer's product identification will not be acceptable. Match colors indicated by reference to the manufacturer's standard color designations. Examine substrates and conditions under which painting will be performed for compliance with paint application requirements. Surfaces receiving paint shall be thoroughly dry before paint is applied. Clean and prepare surfaces to be painted according to the manufacturer's instructions for each particular substrate condition and as specified.
A. B. C. D. E.	 Provide block fillers, primers, finish coat materials, and related materials that are compatible with one another and the substrates indicated under conditions of service and application, as demonstrated by the manufacturer based on testing and field experience. Concrete and Masorry: Semigloss Acrylic Latex Finish: Two finish coats over masorry block filler with total dry film thickness not less than 8.5 mils. Galvanized (zinc coated) Ferrous Metal: Semi-Gloss Silicone Alkyd Enamel Finish: Two finish coats over galvanized metal primer with total dry mil thickness not less than 1.0 mils. Ferrous Metal: Semi-Gloss Alkyd Enamel Finish: Two finish coats over rust inhibitive primer with total dry mil thickness not less than 1.0 mils. Mood: Semi-Gloss Alkyd Enamel Finish: Two coats over primer with total dry mil thickness not less than 1.0 mils. Mood: Semi-Gloss Alkyd Enamel Finish: Two coats over primer with total dry mil thickness not less than 1.0 mils. Mood: Semi-Gloss Alkyd Enamel Finish: Two coats over primer with total dry mil thickness not less than 5.0 mils.

L. M. N.

SPECIFICATIONS

07240 EXTERIOR INSULATION FINISH SYSTEM (EIFS)

CLASSIC PB WALL SYSTEM

Wind Load

 Maximum deflection not to exceed L/240 of span under positive or negative design loads.
 Design for wind load in conformance with local code requirements.

Substrate Systems

Acceptable substrates are PermaBase®Cement Board and other cement-boards conforming with ASTM Cl325 (Type A-exterior), poured concrete/unit masonry, Fiberock® Aqua-Tough™ Sheathing, e²XP™ sheathing (ASTM Cl171), GlasRoc® sheathing (ASTM Cl171), Securock™ glass-mat sheathing (ASTM Cl171), DensGlass® exterior sheathing (ASTM Cl171), gypsum sheathing (ASTM C19/Cl396), Exposure I or exterior plywood (Grade CD or better), or Exposure I OSB.
 Painted and otherwise coated surfaces of brick, unit masonry, stucco and concrete shall be inspected and prepared as approved by BASF Wall Systems before application. Other substrates shall be approved by the system's manufacturer in writing prior to the application. The applicator shall verify that the proposed substrate is acceptable prior to the Senerflex Classic PB Wall System installation.
 The substrate systems shall be engineered with regard to structural performance by

others. Moísture Control

 Prevent the accumulation of water behind the EIF system, either by condensation or leakage through the wall construction, in the design and detailing of the wall assembly.

- a. Provide flashing to direct water to the exterior where it is likely to penetrate components in the wall assembly, including, above window and door heads, beneath window and door sills, at roof/wall intersections, decks, abutments of lower walls with higher walls, above projecting features, and at the base of the wall and anywhere else required by local code.
- b. Air Leakage Prevention: provide continuity of air barrier system at foundation, roof, windows, doors and other penetrations through the system with connecting and compatible air barrier components to minimize condensation and leakage caused by air movement.
- c. Vapor Diffusion and Condensation: perform a dew point analysis of the wall assembly to determine the potential for accumulation of moisture in the wall assembly as a result of water vapor diffusion and condensation. Adjust insulation thickness and/or other wall assembly components accordingly to minimize the risk of condensation. Avoid the use of vapor retarders on the interior side of the wall in warm, humid climates.

Impact Resistance

 Provide Ultra-High impact resistance to a minimum height of 6' - 0" (1.8m) above finished grade at all areas accessible to pedestrian traffic and other areas exposed to abnormal stress or potential impact. Indicate the areas with impact resistance requirements other than "Standard" on contract drawings.

Color Selection

I. The use of dark colors must be considered in relation to wall surface temperature as a function of local climate conditions. Select Finish Coat color with a light reflectance value (LRV) of 20% or higher. The use of dark colors (LRV less than 20%) is not recommended with EIF Systems that incorporate expanded polystyrene (EPS). EPS has a sustained service temperature limitation of approximately TI°C (160°F).

System Joints

I. Minimum ¾" (19mm) expansion joints in the system are required at building expansion joints, at prefabricated panel joints, floor lines of wood frame construction, where substrates change and where structural movement is anticipated. It is the sole responsibility of the project design team, including the architect, engineer, etc., to ultimately determine specific expansion joint placement, width and design. Detail

- specific locations in construction drawings. 2. Minimum ½" (13mm) wide sealant joints are required at all penetrations through the Senerflex Classic PB Design (windows, doors, etc.)
- Specify compatible closed cell backer rod and acceptable sealant that has been evaluated in accordance with ASTM C 1382, "Test Method for Determining Tensile Adhesion Properties of Sealants When Used in Exterior Insulation and Finish System (EIFS) Joints," and that meets minimum 50% elongation after conditioning.
 The system must be properly terminated (back-wrapped a min. of 2", properly sealed, flashed) at all penetrations, lighting fixtures, electrical outlets, hose bibs,

Trim, Projecting Architectural Features

dryer vents, etc.

- 1. Minimum slope for all projections shall be 1:2 (21°) with a maximum length of 30.5 cm $(12^{\circ})^{-3}4e.g.$ 15 cm in 30.5cm (6" in $12^{\circ})^{-7}8$, unless other manufacturer-approved detailing is shown on the construction documents. Increase slope for northern climates to prevent accumulation of ice/snow on the surface.
- Senergy Wa'll Systems were designed and tested to be applied to vertical surfaces. As the slope of the wall system application decreases, the chance for premature deterioration of any wall system increases.
 Low sloping EIFS conditions are subject to more extreme heat. Low sloped areas
- are known to produce an increase in wall surface temperature. This design can lead to accelerated weathering of the low sloped surface.

Coordination with other trades

- Evaluate adjacent materials such as windows, doors, etc. for conformance to manufacturer's details. Adjacent trades shall provide scaled shop drawings for review.
 Air Seals at any joints/gaps between adjoining components (penetrations, etc.) are of primary importance to maintain continuity of an air barrier system and must be
- of primary importance to maintain continuity of an air barrier system and must be considered by the design professional in the overall wall assembly design. Install air seals between the primary Air/Water Resistive barrier and other wall components (penetrations, etc.) in order to maintain continuity of an air barrier system. 3. Provide site grading such that PB Design terminates a minimum of 8" (203mm)
- above finished grade or as required by code.
 Install copings and sealant immediately after installation of the Senerflex Classic PB Design

MANUFACTURERS

Basis-of-Design Senerflex® Classic PB Design (Class PB System) manufactured by BASF Wall Systems.

MATERIALS

- 1. Sheathing primer: black tinted, 100% acrylic-based sheathing primer for wood based sheathing substrates manufactured by BASF Wall Systems %.
- Adhesives/Base CoatsNC-II Base: 100% acrylic polymer-based, non-cementitious base coat.
- Portland cement: Conform to ASTM C150, Type 1, 11, or 1/11, grey or white± fresh and free of lumps.
- Water: Clean and potable without foreign matter.
- Insulation EPS insulation board: Expanded polystyrene± A6TM C578, Type I± Flame spread less than 25, smoke developed less than 450 per A6TM E84, UL 723± minimum density 15.22 kq/m3 (0.95 lb/ft3± K=6.09/mm (0.24/inch)± 19 mm (3/4") thickness minimum
- as indicated on drawings or meeting the following:
- a. Air-dried (aged) six weeks, or equivalent, prior to installation.
- b. Edges: Square within Ø.8 mm per meter (1/32" per foot).
 c. Thickness: Tolerance of plus or minus 1.6 mm (1/16").
- d. Size: 0.6 m x 1.22 m (2' x 4').
- e. Length and width: Tolerance of plus or minus 1.6 mm $(1/16^{\circ}).$
- QR polyisocyanurate insulation board: Quik-R by Dow± or Stucco-Shield II by Atlas Roofing Corporation. Nominal density 32 kg/m3 (2 lbs/ft3)± 25, 38, or 50 mm (1", 1.5",
- or 2") thickness as indicated on Drawings± meeting the following: a. Size: 1.22 m x 2.44 m, 1.22 m x 2.74 m (4' x 8', 4' x 9'), or other size as provided by insulation board manufacturer.
- b. Edges: square within 4 mm
- c. Thickness: tolerance of less than 1" thick). d. Length: tolerance of plus or minus 1/4"
- e. Width: tolerance of plus or minus 1/16"
- K. Reinforcing Mesh: Balanced, open weave glass fiber reinforcing mesh± twisted multi-end strands treated.

ASAP: 100% acrylic-based coating.

- 1. COLOR COAT: 100% acrylic-based coating.
- TINTED PRIMER: 100% acrylic-based primer± color to closely match the building stucco finish.

Finish Coat:

l. 100% acrylic resin finish± air cured, compatible with Base Coat Finish color factory-mixed color as selected by Architect. Finish texture: FINE
